

The benefits of straighter teeth

HEALTHIER GUMS

Properly positioned teeth are easier to brush and floss than teeth that are crowded, crooked, or spaced too far apart. Properly aligned teeth can help gums fit more tightly around them,¹ which may lead to better periodontal health.

EASIER CLEANINGS

With maintenance of good oral hygiene, the chances of having plaque retention, or developing tooth decay, or periodontal (gum) disease can be reduced.

DECREASED RISK OF ABNORMAL WEAR

Properly aligned teeth can be less stressful on the supporting bone jaw joints.

The clear choice for a great smile.

Over 2 million patients are smiling with confidence thanks to Invisalign. Without brackets or wires, Invisalign takes a modern approach to teeth straightening and is virtually invisible.

Q HOW DOES INVISALIGN WORK?

A Invisalign takes a modern approach to straightening teeth, using a custom-made series of aligners created for you and only you. These aligners are made of smooth, comfortable and virtually invisible plastic that you simply wear over your teeth. Wearing the aligners will gradually and gently shift your teeth into place, based on the exact movements your dentist or orthodontist plans out for you. There are no metal brackets to attach and no wires to tighten. You simply pop in a new set of aligners approximately every two weeks, until your treatment is complete and you achieve the confident smile that you've always wanted. The best part about the whole process is that most people won't even know you're straightening your teeth.

Q HOW MUCH DOES INVISALIGN COST?

A In most cases, the cost and treatment time of Invisalign is comparable to traditional braces. However, as with other medical treatments, only your doctor can determine the cost, based on your specific needs. Other factors may include your treatment goals, the difficulty of your case, how long you are in treatment, your orthodontic insurance coverage, and additional factors determined by your dentist or orthodontist.

Q DOES INVISALIGN REALLY WORK?

A Yes. Over 2 million patients with a wide variety of dental challenges have been treated with Invisalign. Invisalign was developed with orthodontists and is used in dental practices worldwide.

The clear alternative to braces.[®]

Developed with Orthodontists,

Invisalign is the virtually invisible and hygienic alternative to braces that lets you keep smiling during your treatment. Invisalign uses a series of custom-made, clear, removable aligners that gradually move teeth toward the smile you've always wanted. Invisalign is so discreet; most people won't even notice you're wearing them.

Clear, Removable, Comfortable

Invisalign fits with your lifestyle to ensure your treatment doesn't hold you back. The removable nature of the aligners means you can take them out for special occasions, continue to eat your favourite foods and brush and floss normally to keep your teeth and gums healthy.

RESULTS YOU CAN SEE

BEFORE INVISALIGN

SPACING TREATMENT
Nine months, 19 aligners

AFTER INVISALIGN

CROWDING TREATMENT
Seven months, 14 aligners

Actual treatment time and results may vary.

Treatment Options

Recent developments have expanded the clinical scope of Invisalign treatment. Nowadays, the Invisalign system can be used to treat most orthodontic patients with increasingly complex malocclusions; from overly crowded teeth and underbites to jaw problems and tooth alignment.

CROWDING
Not enough room for the teeth

SPACING
Spaces between the teeth

OVERBITE
Protruding upper teeth

UNDERBITE
Protruding lower teeth

DEEP BITE
Upper front teeth hide lower teeth

OPEN BITE
Back teeth are together but space is present between the front teeth
